

MANDEEP SINGH

Edmonton, AB | +1-778-594-5505 | meritmandeep35@gmail.com | GitHub | LinkedIn | Portfolio

SUMMARY

Full-stack software developer with a BSc in Computer Science from UBC, currently building **scalable web applications** using React.js, TypeScript, and modern frontend practices. Proven ability to deliver **production-ready systems**, including a microservices platform that reduced manual workload by **95%** and a real estate application with live API integration. Strong in **REST API development**, performance optimization, and end-to-end SDLC execution. Experienced in Agile environments with hands-on use of Docker, CI/CD, and modern web technologies.

SKILLS

Programming: Java (OOP), C#, TypeScript, JavaScript, PHP

Front-End: React.js, Single Page Applications (SPA), TypeScript, HTML, CSS, Tailwind CSS, Bootstrap, Fetch, Axios

Back-End: Spring Boot, REST APIs, JPA (Hibernate), JWT Authentication, CRUD, Microservices

Databases: MySQL, Relational Database Design, Query Optimization

DevOps: Docker, Git/GitHub, GitHub Actions (CI/CD), Vercel, Prometheus, Grafana

Environment & Tools: Linux, LAMP Stack, XAMPP, VS Code, Eclipse, Postman, Jira, Figma

Practices: Agile Development, Code Reviews, Unit Testing (JUnit), Integration Testing, Continuous Improvement

EXPERIENCE

Software Developer

Feb 2026 – Present

Afroidentity Inc.

Remote

- Built and maintained a scalable React + TypeScript application using reusable component architecture, improving development efficiency and application performance.
- Implemented responsive, mobile-first UI, ensuring 100% compatibility across desktop, tablet, and mobile devices.
- Designed and enhanced form workflows with validation, improving data accuracy and reducing user input errors by **~30%**.
- Optimized application performance and SEO through image compression, build optimization, and analytics tracking, reducing page load time and increasing user engagement.
- Collaborated with designers and stakeholders using Figma to translate UI/UX requirements into functional components, reducing design-to-development iteration time by **~20%**.

Technical Support Specialist

Jan 2022 – Sep 2023

Rogers Communications

Kelowna, BC (Remote)

- Resolved **~30 tickets/day** by diagnosing networking, software, and hardware issues; analyzed logs and system configurations to deliver effective solutions while meeting SLA targets.
- Documented solutions and escalations in an internal knowledge base, reducing repeat incidents and improving efficiency.
- Trained and mentored 4 new hires on diagnostic tools, triage workflows, and escalation practices; supported platform transitions by identifying compatibility issues, validating fixes, and coordinating with different teams to minimize downtime.

PROJECTS

Real Estate Web Application (homesbykirat.com)

Jan 2026 – Present

React.js, TypeScript, Spring Boot, REST APIs, Tailwind CSS, MySQL, Vite, EmailJS

- Developed a full-stack web application using React.js + TypeScript and Spring Boot, building scalable REST APIs to integrate REALTOR.ca DDF data and improve data retrieval efficiency, **supporting hundreds of monthly users**.
- Integrated authenticated DDF data feeds to display real-time property listings, pricing, and metadata, ensuring accurate and up-to-date information with optimized backend performance.
- Built reusable frontend components and responsive UI, reducing development time by **~25%** and ensuring seamless cross-device experience across desktop, tablet, and mobile.
- Optimized SEO and application performance through metadata enhancements, image optimization, and efficient data loading, reducing page load time by **~35%** and improving user engagement and lead capture.

TA Allocation and Management System

May – Aug 2025

Spring Boot, React.js, MySQL, Docker, Prometheus, Grafana, REST APIs

- Architected a microservices-based (5 services) full-stack SPA using Spring Boot REST APIs and React.js to automate TA allocation workflows, reduced manual workload by **95%**, and earned UBC's **1st Choice** ranking.
- Implemented role-based access control (RBAC), dynamic availability scheduling via FullCalendar, JPA (Hibernate) for data persistence, and JWT authentication, ensuring secure access and efficient data management across services.
- Containerized all services with Docker; integrated observability stack with Prometheus and Grafana for real-time monitoring and performance tracking.

E-Commerce Electronics Web Application

Jan – Apr 2025

HTML, CSS, JavaScript, Bootstrap, PHP, MySQL

- Delivered a full-stack e-commerce system with catalog, cart, checkout, and admin features, with testing and bug fixes.
- Built PHP/MySQL CRUD features with AJAX live updates, improving checkout responsiveness and page load by **~30%**.
- Designed relational schema with validation and error handling, improving stability and reducing user issues.

EDUCATION

Bachelor of Science, Computer Science – University of British Columbia (UBC)

2025

Dean's List | GPA: 9.2/10 | Coursework: DSA (A), Databases (A+), Software Engineering (A+), Web Apps (A+)

Associate of Science, Mathematics & Statistics – Okanagan College

2021

Dean's List — GPA: 8.3/10

HONORS & AWARDS

UBC Recognition: TA Allocation and Management Software System ranked 1st Choice | **Dean's List:** UBC and Okanagan College |

Merit List: Punjab State Topper (96.67%) | **Full Academic Scholarship:** Meritorious School, Bathinda
